ABSTRACTED-PUB-NO: WO 200215542A

BASIC-ABSTRACT:

NOVELTY - The docking station translates communication  
signals between the  
handheld wireless telephone and the wireline telephone.

The system includes a controller box (105) for connecting several wireless phones (100a, 100b) by adding a connecting sleeves (104a, 104b).

DETAILED DESCRIPTION - An INDEPENDENT CLAIMS are also included for the following;

- (1) for a handheld wireless telephone system;
- (2) for a main controller box.

USE - The docking station can be configured to access wireless communication networks, e.g. GSM networks.

ADVANTAGE - The system enables a conventional wireline telephone to send or receive calls from a wireless telephone network. The wireless telephone may be easily removed from the docking station for independent use as a mobile phone.

DESCRIPTION OF DRAWING(S) - The drawing shows a docking station and a main controller box with two connecting sleeves.

Control box 105

Wireless phones 100a,100b

Connection sleeves 104a,104b
